Profile

Computer Science student with growing passion for AI/ML and Fullstack Development. My interest in tech started when I built my first website project. I quickly realized that I enjoyed solving complex problems so I expanded my field to AI/ML field. Since then, I've built various AI driven web apps, and I'm eager to bring this technical foundation to the work environment for me to grow even more not only as a developer, but also as a problem solver.

Education

Binus University

Bachelor of Computer Science. GPA **3.50/4.00**

Jakarta, Indonesia

2028

Experience

Binus Blockchain and Crypto Club People and Culture Member

West Jakarta, DKI Jakarta
February 2026 – Present

- Developed comprehensive recruitment modules, technical study cases, and interview assessment for the 2026/2027 BBCC activist intake.
- Produced engaging content and edited promotional videos for Binus Crypto Week

Bina Nusantara Computer Club Activist

West Jakarta, DKI Jakarta
October 2024 – October 2025

- Built front-end components and core features of BNCC Technoscape Hackathon 2025 using React.js.
- Collaborated with the development team to maintain and deliver a responsive website event and ensuring a seamless registration pipeline for participants.
- Developed a new strategic work program as part of the BNCC Leadership Training to optimize future organizational operations.

Volunteer Experience & Leadership

Teach For Indonesia Volunteer

West Jakarta, DKI Jakarta
May 2026 – June 2026

- Designed and delivered creative learning modules for preschoolers to foster and boost their cognitive development in a fun and supportive way

Projects

TaskWeaver: task management Web App

Technologies: Node.js, Express.js, PostgreSQL

- Developed the back end of a full-stack web platform using Express.js, with 50+ REST API endpoints for users, groups, tasks, channels, file uploads and activity tracking.
- Designed a layered architecture (controller, service, repository) on a PostgreSQL database hosted on Supabase.

DIVA: Laundry Management Web App

Technologies: C#, ASP.NET Core, Entity Framework Core, PostgreSQL, Bootstrap 5, JavaScript

- Built an ASP.NET Core Web API (.NET 10) with EF Core and PostgreSQL, exposing endpoints for customers,

services, orders, a dashboard and reports.

- Secured the API with Supabase JWT authentication and PostgreSQL row-level security, and managed the schema with EF Core migrations.
- Generated order receipts as downloadable PDFs (QuestPDF) and shareable public links protected by random tokens and rate limiting.
- built 10 pages for login, dashboard, customers, orders, services, reports, settings and a public receipt page, including a 3-step order wizard, live search and a custom SVG revenue chart.

NutriScan: Food Recognition with YOLOv8

Technologies: Python, YOLOv8, Computer Vision

- Built a food recognition system that detects and classifies food items from images using YOLOv8.
- Designed the end-to-end pipeline from dataset preparation and model training to evaluation

CalorIQ: Food Chatbot with Semantic Search

Technologies: Python, NLP, SBERT, Groq/Llama (RAG)

- Built an NLP chatbot that finds foods through semantic search with SBERT embeddings.
- Added a retrieval-augmented generation (RAG) layer on Groq/Llama so answers are grounded in the retrieved food data.

Skills & Interests

Technical: C, C#, Python, Java (OOP), Javascript, HTML/CSS, PostgreSQL, Express.js, Node.js, Scikit-Learn, OpenCV, NLTK, .NET, GitHub

Language: Indonesian, English

Interests: Fullstack Development, Software Engineering, AI/ML, Deep Learning, Computer Vision, Natural Language Processing.
